PERMANENT HAIR REMOVAL WITH IPL

Our response to the nagging question of whether to go for annoying shaving or undergo painful epilation is modern light technology. The application of intensively pulsing light disables hair roots and their growth cells, and is particularly reliable and tissue-sparing. Due to the biological cycle, the hair growth in a treated skin area is reduced after every treatment, with the hair removed fully and permanently in a matter of about 6 applications.

The prices below serve as a guideline. Additional costs are possible.
